

**BCRH-15D (export type) On-site mixed emulsion explosive truck**

**Main Technical parameters**

Capacity: emulsified material 15000kg, catalyzer 120kg, sensitizer 120kg

Efficiency 280kg/min

Tolerance  $\pm 2\%$

**Main advantage:**

- 1) It has a water film lubrication device to reduce the delivery pressure.
- 2) The catalyst and sensitizer are measured by electromagnetic flow-meter to ensure the foaming quality of explosives.
- 3) Screw pump is equipped with over-temperature and over-pressure alarm and safety valve to ensure explosives production safety.
- 4) High degree of automation, one-click for explosives production.
- 5) The explosives delivery pipe can be switched between 2 "and 1.5" to meet the requirements of charging with different apertures.
- 6) The lifting arm of the explosives delivery pipe can be extended by 3 meters and rotated by  $170^\circ$  for charging.
- 7) Terminal sensitization is optional.
