

BCZH-15 On-site mixed emulsion explosive truck

Main Technical parameters

Capacity: emulsified material 11000kg or 4500kg, dry material 4500kg or 11000kg, catalyzer 150kg, sensitizer 150kg

Efficiency 200~280kg/min

Tolerance $\pm 2\%$

Engine max power: 248kw

Total mass: 32000kg

Main advantage:

- 1) It has a water film lubrication device to reduce the delivery pressure.
- 2) The catalyst and sensitizer are measured by electromagnetic flow-meter to ensure the foaming quality of explosives.
- 3) Screw pump is equipped with over-temperature and over-pressure alarm and safety valve to ensure explosives production safety.
- 4) High degree of automation, one-click for explosives production.
- 5) The explosives delivery pipe can be switched between 2 "and 1.5" to meet the requirements of charging with different apertures.
- 6) By adjusting the bottom conversion cover, it can be used for heavy ammonium fuel oil explosive, heavy emulsion explosive, ammonium fuel oil explosive and emulsion explosive.
